

Student Compass - Project Report

Abstract

Student Compass is a responsive web application that guides first-year students through their academic journey.

Problem Statement

Students often struggle to understand semester structure, skills, CGPA, internships, and career planning.

Solution

The application provides a roadmap, learning resources, progress tracking, and personalized guidance.

Modules

Login Page, Dashboard, Roadmap, Resources, Progress Tracking, About.

Technology

HTML5, CSS3, JavaScript, Local Storage.

Responsive Design

Uses CSS Grid, Flexbox, and media queries for desktop and mobile layouts.

Working

User enters details, data is stored in Local Storage, dashboard loads personalized information, progress updates as tasks are completed.

Future Scope

Multiple degrees, backend, authentication, cloud database, AI recommendations.

Conclusion

Student Compass provides a clean, beginner-friendly platform to help students plan and track their learning.
